Contents

Introduction	5
Chapter 1.	
Physical concepts of Mössbauer spectroscopy	11
1.1. Recoilless nuclear resonance emission and absorption	11
1.2. Temperature shift of the Mössbauer spectrum	19
1.3. Isomeric Shift of the Mössbauer spectrum	19
1.4. Quadrupole splitting	21
1.5. Emission Mössbauer spectroscopy of the after-effects of nuclear transformations in solids	25
1.6. One-electron exchange between neutral and ionized acceptor iron centers in GaAs and GaP	27
1.7. Observation of charge exchange by copper impurity atoms in AgCl	38
1.8. Tin chalcogenides	41
1.9. Compounds of tin with elements of the fifth group	45
1.10. Tin impurity atoms in silicon, germanium, and silicon-germanium solid	53
Chapter 2.	
Identification of neutral and ionized tin donor states in PbS and PbSe	64
2.1. Charge exchange of tin atoms in $Pb_{1-x}Sn_xS$ solid solutions	64
2.2. Charge exchange of tin atoms in $Pb_{1-x}Sn_xSe$ solid solutions	67
2.3. Local symmetry and electronic structure of atoms in the $Pb_{1-x-y}Sn_xNa_ySe$ lattices in the gapless state	70
2.4. Two-electron tin centers with negative correlation energy in lead chalcogenides. Determination of the Hubbard energy	78
2.5. Hubbard energy of two-electron tin centers in $PbS_{1-z}Te_z$ solid solutions	89

2.6. Local symmetry and electronic structure of tin atoms in $(Pb_{1-x}Sn_x)_{1-z}In_zTe$ *lattices*	92
2.7. Statistics of electrons in PbS with U centers	96
2.8. Energy parameters of two-electron tin centers in PbSe	104
2.9. Detection of singly ionized state of two-electron tin centers with negative correlation energy in $Pb_{1-x}Sn_xS$ *alloys*	112
2.10. Two-electron centers with negative correlation energy $Pb_{1-x}Sn_xSe$ *solid solutions*	117
Chapter 3.	
Two-electron tin centers formed in lead chalcogenides as a result of nuclear transmutations	123
3.1. Position of antimony impurity atoms in a PbTe lattice, determined by emission Mössbauer spectroscopy	123
3.2. Antistructural defects in PbTe-type semiconductors	127
3.3. Determining the position of antimony impurity atoms in PbS by $^{119}Sb(^{119m}Sn)$ *emission Mössbauer spectroscopy*	131
3.4. Two-electron tin centers formed in lead chalcogenides as a result of nuclear transmutations	135
3.5. States of antimony and tin atoms in lead chalcogenides	148
3.6. Two-electron tin centers with a negative correlation energy in PbS	156
Chapter 4.	
Identification of tin states in chalcogenige glasses	172
4.1. The influence of the crystal- glass transition on the state of impurity tin atoms in chalcogenide semiconductors	172
4.2. Tin impurity atom states in modified As_2Se_3 *films*	181
4.3. Properties and structure of $(As_2Se_3)_{1-z}(SnSe)_{z-x}(GeSe)_x$ *and* $(As_2Se_3)_{1-z}(SnSe_2)_{z-x}(GeSe_2)_x$ *glasses*	186
4.4. Local structure of Ge – S, Ge – Se, and Ge – Te vitreous alloys	197

4.5. Structure and physicochemical properties of glasses in the $(As_2Se_3)_{1-z}(SnSe_2)_{z-x}(Tl_2Se)_x$ *u* $(As_2Se_3)_{1-z}(SnSe)_{z-x}(Tl_2Se)_x$ *systems*	202
Chapter 5.	
Two-electron tin centers formed in chalcogenide glasses as a result of nuclear transmutations	214
5.1. Two-electron tin centers formed in glasses As_2S_3, As_2Se_3, *and* As_2Te_3 *as a result of nuclear transformations*	214
5.2. Impurity centers of tin in glassy arsenic chalcogenides	224
5.3. The state of tin impurity atoms in vitreous germanium chalcogenides	233
Chapter 6.	
Electron exchenge between impurity centers of tin in lead chalcogenides and chalcogenide glasses	247
6.1. Identification of neutral and ionized tin donor states and the observation of two-electron exchange between tin centers in solid solutions based on PbS and PbSe	247
6.2. Mechanism of two-electron exchange between neutral and ionized centres of tin in $PbS_{1-x}Se_x$ *solid solutions*	257
6.3. Investigation of two-electron exchange between neutral and ionized impurity centers	266
6.4. *Unconventional tin atom states in mixed silver and tin chalcogenides having NaCl structure*	274
6.5. Temperature dependence of the frequency of two-electron exchange between impurity negative-U tin centers in lead sulfide	279
6.6. Electron exchange between impurity centers of tin in lead chalcogenides	283
6.7. Electron exchange between tin impurity U^- *centers in* PbS_zSe_{1-z} *alloys*	294
6.8. The two-electron exchange between the U - tin centers in crystal and Glass-like chalcogenide semiconductors	307

Chapter 7.	
The electrical activity of germanium impurities in lead chalcogenides	312
7.1. The electrical activity of isoelectronic germanium impurities in lead chalcogenides	312
7.2. Arrangement of arsenic atoms in the PbTe lattice	317
7.3. Observation of Bose condensation in $(Pb_{0.4}Sn_{0.6})_{0.86}In_{0.14}Te$ semiconductor solid solutions using Mössbauer spectroscopy	321
7.4. Two-electron germanium centers with a negative correlation energy in lead chalcogenides	327
7.5. Mössbauer U^- centers as tools for studying the Bose condensation in semiconductors	339
Conclusions	351
Appendix	
Determination of the composition of chalcogenide semiconductors X-Ray Fluorescence Analysis	352
A.1. *Determination of the composition of binary chalcogenide glasses by X-Ray fluorescence analysis*	352
A.2. Determination of the composition of multicomponent chalcogenide semiconductors by x-ray fluorescence analysis	360
A.3. X-ray fluorescence analysis of $Ge_{1-x}Se_x$, $As_{1-x}Se_x$, and $Ge_{1-x-y}As_ySe_x$ glasses using electronic excitation	372
References	383
